

The Cretaceous Period began about 136 million years ago, and lasted until the dinosaurs' extinction, about 64 million years ago. Many different dinosaurs lived in this period of time.

These dinosaurs include the plant-eating iguanodon, which lived in the forest; the triceratops, which had three horns on its head; and the ankylosaurus, which used the bony growth on its tail to protect itself from enemies. The tyrannosaurus was the largest meat-eating dinosaur. It is thought that the tyrannosaurus was fast-moving, and used its speed to bring down prey. Truly the tyrannosaurus can be called the king of the dinosaurs.

Print out this pattern, cut out the pieces, and assemble as shown in the diagram. It may be easier to cut widely around each part first, then trim the parts carefully. Don't worry if you can't cut too closely around some of the fine details.

Completed model

How to build the tyrannosaurus

*Build in the order shown by the numbers.

1. Build the body

2. Put it all together

How to build the triceratops

*Build in the order shown by the numbers.

2. Build the head

1. Build the horns

3. Put it all together

How to build the iguanodon

*Build in the order shown by the numbers.
