

The Galapagos Islands lie 1000 km (600 miles) west of the South American country of Ecuador, right on the equator. Here live plants, animals, birds, and fish that can't be found anywhere else in the world. The iguanas are calm, and not afraid of humans. The land iguana loves to eat cactus. The marine iguana dives into the ocean to eat seaweed.

Print out this pattern, cut out the pieces, and assemble as shown in the diagram. It may be easier to cut widely each part, and then trim the parts carefully. Don't worry if you can't cut too closely around some of the fine details.
