Biology Series

Stegosaurus

The stegosaurus is a dinosaur that lived about 150 million years ago.

The large plates on the stegosaurus' back had many blood vessels flowing through them. They think these plates were used to regulate the stegosaurus' body temperature by absorbing or radiating heat.

Back piece 2 (top)

- cut line
- - - mountain fold line
- - - valley fold line

\* Cut out the card above and save it. You can collect the cards from each of the Papercraft projects to make your own mini-book!

★Directions

Print out Page 1 and Page 2. Cut out all the parts, and fold along the mountain and valley fold lines.

1. Fold the body

2. Assemble the back

Glue back piece 1 and back piece 2 together, and fold along the mountain and valley fold lines.

3. Attach the back to the body
